About Me

I grew up in Jackson, New Jersey, but I'm originally from Staten Island, New York. Growing up in the woods I never really had much to do, so I fell in love with computers from a young age. I built my first computer in the fall of 2013, and fell in love with computer science shortly after. I graduated from Jackson Liberty High School in 2018 and took almost every computer science course they had to offer. I originally wanted to go to NJIT to pursue computer science, but after visiting Stockton I knew that this was where I wanted to go. I am currently enrolled in the computer science program at Stockton University and my intended graduation date is December of 2022. I'm currently maintaining a 3.5 GPA while also working part time. I seriously love working with computers and I can't wait to start my career.

Education

Stockton University

Bachelor of Science in Computer Science

Graduating December 2022

Relevant Coursework: Software Engineering | Information Assurance & Security | Programming and Problem Solving I | Programming and Problem Solving II | Data Structures and Algorithms I | Data Structures and Algorithms II | Computer Networking Principles | Web Application Engineering | Probability & Applied Statistics | Foundations Of Computer Science | Knowledge Discovery and Data Mining | Calculus II | Discrete Mathematics

Work experience

Target General merchandise

October 26, 2017–Current

Howell, NJ

During my time at Target I wear many hats. Having been at Target for almost 5 years I've worked almost every position in the store. Although this seems like a long time to be at the same place, I enjoy my job at Target, and I feel that Target has taught me many things such as teamwork, Patience and dedication.

Skills

- **Linux**
- **Windows**
- **Visual Studio Cod**
- **Data Structures**
- **Databases**
- **Object Oriented Programming**

Programming Language proficiency

- Java
- Python
- HTML
- CSS
- JavaScript
- MySQL
- Flask
- PHP

Completed Projects

Software-engineering-Project: <https://github.com/pattar35/Software-engineering-Project>

Our client worked in the I.T. department for Americal Medical and contacted my group to digitize a form that they fill out frequently at the hospital. This project had a list of needs that we were able to fully meet.

1. Fully function Database (MySql+Flask)
2. Creating form tab (Html+MySql+javascript+CSS)
3. Editing form tab (Html+MySql+javascript+CSS)
4. Viewing form tab (Html+MySql+javascript+CSS)
5. Admin hierarchy (Html+MySql+javascript+CSS)
6. Signature field (Html+MySql+javascript+CSS)
